About me

Hi! I'm David Guerreiro, a web developer based in London. I'm passionate about the web so I have moved to the UK in order to improve my skills as a web developer.

As a professional web developer, I have always used the latest standards to develop websites in a professional way. I have spent most of my time working with PHP, MySQL, HTML5, CSS3, Javascript (including libraries like jQuery) and sometimes with responsive design as well. I'm also developing a videogame as a side project.

I write code using Sublime Text 2. I keep my task organized using Redbooth and my code using git.

Skills

The language I have experience the most is PHP. Although, working as a web developer, I have dealt with many more technologies like:

1. **PHP**: I have always developed dedicated CMS from the ground up, using pure PHP. In addition, I have used well-known libraries, like Prestashop and WordPress.

2. **MySQL**: I have developed robust databases schemes and ER Models. For me, the design of the database is really important. An application with a bad database scheme can't work properly. I have strong knowledge about SQL language as well.

3. **HTML5**: I have been focused in write a SEO-friendly HTML, using the latest standard of this language. Also I always keep the content separated for the design.

4. **CSS3**: My CSS code is always well commented and tidy. I worry about it being cross-browser and responsive.

5. **Javascript**: I have experience with core Javascript, but I have mainly worked with JQuery. I know how to implement any kind of plugin when I need one.

6. **WordPress** : I have a full understanding of all WordPress procedures, with experience developing themes and plugins. Also, I know how to implement any solution or fix any problem in both front-end /admin panel.

Work Experience

October 2014 – August 2015
Web Developer – Backend developer

BaseCreative Studio 209 Business Design Centre London N1 DQH
Phone 0207 359 005

My first job in UK was in an agency called BaseCreative in Angel. I have been working there for eight months as a backend developer. My duties there included developing themes and plugins in both WordPress and a dedicated CMS developed by the company.

Also I had to design robust DB solutions for data management and I implemented Ajax in several web pages in order to improve the user experience, always keeping a PHP solution behind.

I had the opportunity to work with a great professional team and this experience has provided me with a great range of knowledge about how to develop either from scratch or with CMS. Also I know which technologies are the better to solve a specific problem, how many hours are needed to finish either a project or task and so on.

August 2014 –September 2014
Web Developer – Freelance

I developed some full websites by my own working as a freelance. I was working alone so I had to be in charge of the whole process, from the meetings whit clients, designing to the final testing of the site.

All my sites were developed following my quality standards, including responsive design, friendly user experience.

March 2014 – July 2014
Web Developer

PSP-Informática *N-VI 24400 Ponferrada*
Phone 987 42 69 66

As a web developer, I was working in a e-commerce project based in some different e-commerce platforms like eBay and amazon. I was the main programmer and I designed some HTML Templates in order to make customizable ads. Following a professional way, I put into practice my knowledge about HTML5, CSS3 and JavaScript/Jquery.

In addition, I have developed the new website of the company. They wanted a professional who could build a responsive website, so the job fitted perfectly for me. If you want find out more about this site, I recommend you to visit my portfolio.

Education

May 2015
Workshop about Web Performance and Responsive Design – Web Performance London

I attend a whole day workshop in Brick Lane given by Web Performance London and most specifically Guy Podjarny about how to develop a whole responsive site being care about performance, taking into consideration different ways to load the content on mobile, desktop and so on.

August 2014
First Certificate in English – University of Cambridge
Reference Number: 148ES0390086

In order to improve and certify my English, I prepared myself to pass the First Certificate in English exam.

September 2012 – June 2014
Senior Technician in Web Development/Apps
I.E.S Virgen de La Encina Calle General Gómez Núñez, 57, 24402 Ponferrada

I studied how to develop websites and web applications. Even though I learned a lot, I decided to learn more about the latest technologies, like responsive design, performance optimization and more, in my spare time.

Aspirations

At the moment, I would like to work in a company which worries about the way they deal with code and how they keep up-to-date. Also I would like to spend my time working with high-end developers who have more experience than me. I think that this is a good way to both improve as a web developer and share new ideas and methods about developing.

I would prefer to work in a small company that I can grow with rather than a big one. There are better ways to communicate between the workmates. I enjoy attending conferences about the latest standards of technology.

Therefore, I aim to work with the best professionals here in London in order to gain more experience. That's what I really want to do.
